◆ AI Overview

To download files to your Chromebook via SCP (Secure Copy Protocol), **open the Terminal app, use the built-in ChromeOS Files app, or download an Android app like AndFTP**. This is ideal for securely pulling files from a remote server to your local Downloads folder. [🔗](#)

Method 1: Using the Terminal (Native Command Line)

If you are comfortable using the command line, you can use the `scp` utility built into the ChromeOS Linux environment. [👤 Reddit](#)

1. Open the **Terminal** app on your Chromebook.
2. Ensure you have your Linux environment enabled and your private SSH key (if required) stored inside the Linux files section.
3. Run the `scp` command to download files to your current directory:

```
scp username@remote_host_ip:/path/to/remote/file.txt .
```

(Note the dot at the end, which tells it to copy to your current Linux folder).
4. Open the **Files** app, go to **Linux files**, and move the downloaded file to your **Downloads** folder if needed. [🔗 Super User +2](#)

Method 2: Using the Secure Shell Extension (SFTP Mount)

You can visually browse your remote server as if it were a local drive using the official Chrome Web Store application.

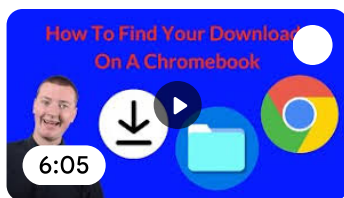

1. Install the Secure Shell App from the Chrome Web Store.
2. Open the app and create a new **SSH connection** using your server credentials or private key.
3. Once connected, look at your Chromebook's native **Files** app. Your server will now appear as a mounted drive on the left-hand sidebar.
4. You can easily drag and drop files directly from the server to your local **Downloads** folder. [🌈 Google Help +2](#)

Method 3: Using Android Apps (GUI Interface)

If you prefer a graphic interface without using the command line, you can use Android FTP/SFTP clients. [📺 AnExplorer](#)

1. Open the Google Play Store on your Chromebook.
2. Download and install a client such as AndFTP or [AnExplorer File Manager](#).
3. Open the app and configure a new **SFTP** or **SCP** connection using your host IP, username, and password.
4. You can then navigate your remote server and tap download, which will save the file directly to your Chromebook's Downloads.  AnExplorer +2

For a visual step-by-step demonstration of how to locate, sort, and manage your downloaded files once they are saved to your local Downloads folder:
