chromebook download folder scp ssh

Downloading a Folder from a Chromebook via SCP/SSH

You can use **SCP** (Secure Copy Protocol) over SSH to download a folder from a remote server to your Chromebook's **Downloads** folder. This works if you have SSH access to the server and a terminal app installed on ChromeOS.

1. Install an SSH/SFTP client on Chromebook

ChromeOS doesn't include SCP by default, but you can:

- Use the **Secure Shell** extension from the Chrome Web Store, which includes an SSH/SFTP terminal [chromewebstore.google.com](https://chromewebstore.google.com/detail/secure-shell/iodihamcpbpeioajjeobimgagajmlbd) .
- Or use the built-in **Files** app with SFTP mounts (if Linux is enabled) chromewebstore.google.com .

2. Find your Chromebook's Downloads folder path

On ChromeOS, the default Downloads folder is:

Code

Copy

```
/home/chronos/user/Downloads/
```

If you have Linux enabled, you can also access it via:

Code

Copy

```
/mnt/chromeos/MyFiles/Downloads/
```

Enable Linux sharing in the Files app to make it visible [Super User](#) .

3. SCP syntax for downloading a folder

The general format is:

Code

Copy

```
scp -r username@<server_ip>:/path/to/folder/ /path/to/local/destination
```

- `-r` = recursive copy (for folders)
- `username@<server_ip>` = your SSH credentials
- `/path/to/folder/` = remote folder path
- `/path/to/local/destination` = local destination (e.g., `~/Downloads/`)

Example:

Code

Copy

```
scp -r root@192.168.1.100:/home/user/data/ ~/Downloads/
```

This downloads the `data` folder from the remote server to your Chromebook's Downloads folder

Super User

Where is the location of the downloads folder on a ChromeBook?<https://superuser.com/questions/729587/where-is-the-location-of-the-downloads-folder-on-a-chromebook>[Show All](#)

chromebook download folder scp ssh

```
scp -r username@<server_ip>:"/path with spaces/folder" ~/Downloads/
```

- For interactive transfers, use SFTP instead of SCP.

5. Alternative: SFTP via Files app

If you prefer a GUI, enable Linux sharing, mount the remote server via SFTP in the Files app, and drag-drop the folder into your Downloads folder chrome.webstore.google.com.

In summary: Install an SSH/SFTP client, use the `scp -r` command with the correct paths, and target `/home/chronos/user/Downloads/` on Chromebook to download folders securely over SSH.
