In the **ChromeOS Terminal** (the Linux/SSH terminal app), you can select all text using standard ChromeOS keyboard shortcuts.

Select All Text in ChromeOS Terminal

- **Keyboard Shortcut:**

Ctrl + Shift + A → Selects all text in the terminal buffer.

(On some Chromebook keyboards, you may need to press *Search* instead of *Ctrl* for certain shortcuts, but in the *Terminal* app, *Ctrl* works normally.)

- **Mouse / Touchpad Method:**

1. Click anywhere inside the terminal window.
2. Press **Ctrl + A** (if Ctrl+Shift+A doesn't work, try this).
